## SAFETY AND WARNING!

Before plugging the table into the outlet, make sure that the lift columns are level and set at the lowest position and all the screws are tightened, to avoid the desk making noise and wobbling.

This product can be used by children age 8 years and older, a person with reduced physical, sensory or mental capacity as long as they have been given proper instructions / training on how to use the product in a safe way and understand the hazards involved. Children shall not play with the product.

It is not recommended to set the operating mode of the table to "one touch", as this mode is not permitted in some countries. Please inform yourself before changing the settings.

## RESET BEFORE FIRST USE

To make the table ready for use:

1. Press the "Down" button until the table reaches the lowest position.
2. Press the "Down" button for at least 5 seconds until the table retracts and beeps.
3. The table is now ready for use

## OPERATION

| Settings           | Icon                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Instructions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Height limit       | <br> <br><br> <br>  | To get into setting mode for min / max height you have to press the „Menu“ button for about 5 seconds.<br>After that the min height is displayed. You can change the min height by pressing the „Up“ and „Down“ button until the desired height is displayed.<br>After that you press the „Menu“ button again and the current max height is displayed.<br>You can change the max height by pressing the „Up“ and „Down“ button until the desired height is displayed.<br>Then you press the „Menu“ button for about 5 seconds and "SUS" is displayed indicating that the selected min and max heights have been saved.<br>Attention: if you want to set 75 as the minimum height, choose 73 as the height, because the default desktop thickness is 2 cm and it will be automatically added. In case you have changed the table top thickness, please add that value.<br>To change the settings back to the factory settings you have to do the same procedure again entering 68.0 cm + entered table top thickness (factory setting 2.0 cm) for the min setting and 118.0 cm + entered table top thickness (factory setting 2.0 cm) for the max setting. |
| Reminder           | <br>                                                                                                                                                                                                                                                                                                                                                                                                                                               | To set the "Reminder function", briefly press the "reminder" button.<br>You can navigate through the different intervals using the "Up" or "Down" button.<br>After 5 seconds, the setting is saved and you automatically return to the menu                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Reset              | <br>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | To perform a reset, press and hold the "Down" button until the frame has reached the lowest position and rebounds 0.5 cm.<br>"RST" appears on the display of the hand control. The reset process is now complete and the hand control beeps.<br>If an emergency occurs during the reset, release the "Down" button to stop the rack. the reset process will then be cancelled. Once the reset is complete, you must repeat the entire process until it is successful. Otherwise, you will not be able to carry out any further processes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| E12, E22              | Control box failure         | Control box needs to be replaced                             |
| E13, E23              | Connection problem          | Check cables                                                 |
| E14 - E17   E24 - E27 | Motor failure               | Motor / lifting column needs to be replaced                  |
| E18, E28              | Overload protection         | Reduce the weight                                            |
| E36                   | Motor blocked               | Perform a reset as described under „Reset before first use“  |
| E40, E41              | Series signal error         | Check cables or the control box needs to be replaced         |
| E42                   | EEPROM error                | Control box needs to be replaced                             |
| E43                   | Gyro-sensor error           | Control box needs to be replaced                             |
| HOT                   | Excessive use               | Do not use for 20 minutes. System will recover automatically |

## CORRECT DISPOSAL

The symbol of the crossed-out dustbin indicates that this electrical or electronic equipment must not be disposed of with household waste at the end of its service life, but must be taken for separate collection by the end user. Free collection points for old electrical equipment are available in your area for the return of the equipment, as well as other acceptance points for the reuse of the equipment, if applicable. You can obtain the addresses from your city or local government. Also distributors with a sales area for electrical and electronic equipment of at least 400 square meters and distributors of food with a total sales area of at least 800 square meters, which offer several times in the calendar year or permanently electrical and electronic equipment and make it available on the market, are obliged to take back free of charge old electrical and electronic equipment. When supplying a new EEE to an end user, they must take back free of charge an old EEE of the end user of the same type that fulfills essentially the same functions as the new EEE, at the place of supply or in the immediate vicinity thereof, and, without purchasing an EEE, take back free of charge at the end user's request up to three old EEEs per type that do not exceed 25 centimeters in any external dimension, in the retail store or in the immediate vicinity thereof. If the old electrical or electronic equipment contains personal data, you are responsible for deleting this data before returning it. If this is possible without destroying the old electrical or electronic equipment, please remove old batteries or rechargeable batteries as well as old lamps from it before returning it for disposal and take them to a separate collection. For more information on the Electrical and Electronic Equipment Act, please visit [www.elektrogesetz.de](http://www.elektrogesetz.de). (EEE Reg. No. DE: 52242201)
